

# SEYED HAMID TABARI

(479) 439-2334 ♦ Bentonville, AR ♦ seyedhamidtabari@gmail.com ♦ <https://shtabari.github.io>

## SUMMARY

Result-driven professional with experience in statistical modeling, machine learning and deep learning and Large Language Models

- Directed projects to investigate and increase the effectiveness of predictive and generative models.
- Scale up and build pipelines to reduce computation runtime

Expert in natural language processing and analytical tools, database management, programming languages, data mining, and process improvement. Strong leader and quick learner consistently exceed

- ✓ LLM/NLP Deep learning AI Certificates
- ✓ Deep learning, Computer Vision, Natural Language Processing, Machine learning (Bayesian Networks, SVM, LASSO, Random Forest, K-means, PCA)
- ✓ SQL, SAS, Tableau, Alteryx, KNIME, Redis
- ✓ Python (Numpy, PyTorch, Tensorflow, Pandas, Scikit-learn, Airflow, FastAPI, OpenCV, CVXpy, Transformers, nltk, Langchain, Streamlit, Ray)

## EDUCATION

**UNIVERSITY OF ARKANSAS**, Fayetteville, AR

2018 - 2020

Master of Science in Statistics and Analytics (Minor in Computer Science), GPA= 3.9/4.0

**Tarbiat Modares University**, Tehran, Iran

2014 - 2016

Master of Science in Nanophysics, GPA=3.9/4.0

## WORK EXPERIENCE

**Walmart Global Tech**, Bentonville, AR

April 2022 - Present

**Senior Data Scientist / Machine Learning Eng.**

Projects: Text to SQL

- Specialized in optimizing Language Model Models (LLMs) on Walmart datasets to convert textual information into SQL code, speeding up providing valuable insights to merchants.

Projects: Managing Financial Planning Walmart Team

- Leading Financial-Planning project producing accurate ML-driven quarterly forecasts for Omni Walmart departments, resulting in 4 million dollars and 152 hours per associate time saving quarterly.

Projects: Item – Store level forecasting

- Developing deep learning sequence model to predict forecasts for every item at store level, which is 540 million forecast units equal to 9 billion dollars annually.
- Designing and Implementing forecasting framework/pipeline to automate geo-demand forecasts.

**Walmart Global Tech**, Bentonville, AR

June 2020 – April 2022

**Data Scientist**

Projects: Sales Forecasting and Business Planning

- Develop a forecasting ensemble model including Bayesian, boosting, and deep learning models to replace the manual and error-prone financial planning tools, saving \$24M labor cost.
- Optimize and scale up machine learning algorithms on Google Cloud via Airflow Apache plus API based programming and Kubernetes Engine, shortening runtime by 80%.
- Create and implement Entity Relationship (ER) Diagrams to collect data from diverse sources, preparing them for machine learning algorithms using SQL.
- Utilize causal inference procedure (Causal Forest) to detect and measure main sales drivers such as products' horizontal facings for modular changes and retail prices for markdowns
- Build and optimize time-series dashboards to visualize data and key findings via Tableau and Python Dash, which provides insightful recommendations to business stakeholders to solve business problems

Project: Product Substitute Recommendations Levering Image Recognition

- Spearheaded a deep learning substitute recommendation model leveraging CNN and RNN for General Merchandise and Consumables & Food categories.
- Implemented a natural language processing model to unify products descriptions, improving test accuracy of the recommendation model up to 94%
- Automated data integration, acquisition, and preparation processes from multiple resources to construct proper train/test datasets for deep learning & machine learning usages.

### On the Job Data Skills

Spark: ★★★★★  
TensorFlow: ★★★★★  
GCP: ★★★★★  
LLM: ★★★★★  
NLP: ★★★★★  
Kubernetes: ★★★★★

### On the Job Data Skills

BigQuery: ★★★★★  
PyTorch: ★★★★★  
Machine learning: ★★★★★  
Cloud Computing: ★★★★★  
Python: ★★★★★  
Deep learning: ★★★★★  
Computer Vision: ★★★★★  
Tableau: ★★★★★  
SQL: ★★★★★  
NLP: ★★★★★

**Research Assistant (Machine Learning Researcher)** (Department of Chemistry)

- Enabled a team led by Head of Chemistry Department to save 60% of their resources by employing a reusable machine learning algorithm (fuzzy clustering) to address their business need of medicine pattern recognition
- Mentored and coached three analysts and programmers in conducting machine learning techniques on biological datasets, resulting in their paper publications

**On the Job Data Skills**

R: ★★★★★  
 Python: ★★★★★  
 Java: ★★★★★

**TARBIAT MODARES UNIVERSITY, Tehran, Iran**

September 2014 – August 2016

**Research Assistant** (Department of Materials Engineering)

- Performed machine learning and statistical analysis methods (Regression and Maximum Likelihood) on both structured & unstructured datasets to investigate the effectiveness of two new antibiotics
- Created a density heatmap to depict the cell membrane disturbance in presence of new antibiotics to quantify antibacterial mechanism, exploring the most effective antibiotic for upcoming projects

**On the Job Data Skills**

Database: ★★★★★  
 Linux: ★★★★★

## ACCOMPLISHMENTS

---

- Certificates** Natural Language Processing Specialization by DeepLearning.AI  
 Link: <https://coursera.org/share/37e66f01f106cc318ae8c2252e18cd1d>
- Certificates** Natural Language Processing Specialization by DeepLearning.AI  
 Link: <https://coursera.org/share/06c7dfb1a26cd72f36bdfd1d8730040f>
- Work Award** Exemplary performance award, securing the top performance ranking achieved by top 1% of employees.
- Scholarship** from Department of Mathematical Sciences for the most outstanding academic excellence
- Teaching assistantship experience:** Customized tutoring lessons for 100+ students in all mathematics and statistics courses by analyzing their grade records, enhancing their performance by average 35% after one month.
